

DEMOLITION AND CONSTRUCTION WASTE

We offer comprehensive demolition and recycling services. We will arrange turnkey demolition of buildings (concrete, reinforced concrete, masonry), dismantling of technologies, asbestos disposal and excavation works. We carry out demolition using hydraulic shears and demolition hammers. We have our own demolition equipment at our disposal, which enables the implementation of work in the shortest possible time and while ensuring maximum safety when removing buildings.

DEMOLITION AND CONSTRUCTION WASTE

DEMOLITION AND RECYCLING TECHNOLOGY

We have modern equipment needed for demolition, sorting of construction waste and final processing of scrap materials at our disposal:

- Volvo 160 EW wheel excavator with grapple, hammer
- SANY 36t track excavator with accessories (grapple, hammer, demolition shears, crushing shears)
- L910 wheel excavator
- front wheel loaders
- two mobile crushing lines for construction waste treatment
- two sorting lines for bulk materials (soil, mixed rubble, aggregate)

RECYCLING OF CONSTRUCTION WASTE

We provide recycling of all types of construction waste such as concrete, bricks, ceramics, tar-free asphalt, soil, stone and mixed construction and demolition waste.

The output of sorting and crushing is recycled concrete and masonry, which can also be used for landscaping, landfill reclamation, filling of excavated surface mines, quarries, sand pits and other works.

We recycle construction waste directly at the customer's site using a jaw crushing unit, sorting the pure fraction according to the customer's requirements with a mobile screener Keestrack Novum.
